Output Signals

- X- = (SiPM signal) * (encoder gain) * (X- fraction)
- X+ = (SiPM signal) * (encoder gain) * (X+ fraction)
- Y- = (SiPM signal) * (encoder gain) * (Y- fraction)
- Y+ = (SiPM signal) * (encoder gain) * (Y+ fraction)

Typical event position calculation:

$$\begin{aligned} \text{X column} &= (X+ - X-) / (X+ + X-) \\ \text{Y row} &= (Y+ - Y-) / (Y+ + Y-) \end{aligned}$$

Example

SiPM signal at column 4, row 3 (excluding encoder gain)

- X- = (Column 4 signal) * 0.2483
- X+ = (Column 4 signal) * 0.8021
- Y- = (Row 3 signal) * 0.1861
- Y+ = (Row 3 signal) * 0.8876

Safety Information

WARNING – High Voltage

- High voltage may be present during operation
- High voltage stored on capacitors may be present after power is removed
- Improper handling may result in personnel injury or equipment damage

This high-voltage device must be used only by personnel trained and qualified in safe handling, installation, and operation of high-voltage equipment.

CAUTION – Electrostatic Discharge (ESD) Sensitivity

The circuit board can be damaged by electrostatic discharge. Observe precautions for handling electrostatic sensitive devices. Handle only at static-safe workstations.

High-Gain Photodetectors

High-gain photodetectors such as silicon photomultipliers may conduct damaging currents if exposed to high optical signal levels while the bias voltage is applied, or if the bias voltage exceeds the recommended operating range. These devices must be operated only in low-light conditions, and only within the manufacturer's recommended bias voltage range.

Handling and Disassembly

This product may be provided with a protective enclosure. Disassembled enclosure components and circuit boards may contain sharp edges. Take appropriate safety precautions while assembling or disassembling the enclosure and handling disassembled components.
